## EDUCATION

M.S. Computer Engineering · (GPA: 3.95)

University of California, Irvine ..... 9/23 – 6/24  
Algorithms, Data Structures, Computer Architecture, Operating Systems, Convex Optimization, Control & AI, Data  
Privacy, Deep Learning Compilers, Deep Learning Accelerators

B.S. Computer Engineering · (GPA: 3.90)

University of California, Santa Barbara ..... 9/19 – 6/23

---

## EXPERIENCE

Embedded & Cyber-Physical Systems Lab / Researcher · Irvine, CA ..... 6/23 – 6/24

- **LLM4PLC: Harnessing Large Language Models for Verifiable Programming of PLCs in Industrial Control Systems** .... (ICSE'24 · 🌐)
    - Architected a state-of-the-art Large Language Model pipeline for Siemens Programmable Logic Controllers, with a measured increase in automated code generation ability by 25%
    - Automated a code analysis and formal verification framework for programmatically detecting and correcting errors in LLM-generated PLC code, resulting in an order-of-magnitude decrease in faulty code
    - Evaluated the LLM4PLC pipeline on real-world engineering test cases, resulting in 100-200% gains in a human assessment of code correctness, maintainability, and style
    - DATASETS & TOOLS · GPT-3.5, GPT-4, Code Llama, LoRAs, OSCAT BASIC
    - LANGUAGES · Python, Shell, C, C++, IEC 61131-3/SCL
  - **MIC-E-MOUSE: Covert Eavesdropping through Computer Mice** ..... (in review @ NDSS'25)
    - Developed a Machine Learning pipeline to extract audio data from consumer mice using a novel side-channel attack, leading to an 80% speaker classification accuracy, compared to 92% with ground-truth data
    - Spearheaded the creation of a Convolutional Neural Network classifier to categorize speaker identities by reconstructing waveforms from noisy spectrogram images, resulting in a decrease in human-assessed error rate by 83%
    - Ethically engineered a proof-of-concept injectable exploit in real-world software to showcase the viability of the side-channel attack, including a compromised binary for distribution to targetted users.
    - DATASETS & TOOLS · PyTorch, OpenAI Whisper, AudioMNIST, VCTK
    - LANGUAGES · Python, Shell, C, C++
  - **LLM4CVE: Enabling Iterative Automated Vulnerability Repair with Large Language Models** ... (in review @ ASE'24)
    - Architected a state-of-the-art Large Language Model pipeline for programmatically repairing code vulnerabilities using publicly available CVE data, resulting in a 20% gain in code similarity compared to a ground-truth fix
    - Developed Low-Rank-Adaptions for common LLMs (including Llama 3 and Code Llama) with a custom dataset, leading to an increase in performance for open-source LLMs in our code-fixing benchmark
    - Performed a thorough evaluation of the LLM4CVE pipeline through both automated and human-centric means, including end-to-end tests with a real-world codebase, and human assessment resulting in an 85% confidence rating in our automated framework (compared to 100% for the ground-truth fix)
    - DATASETS & TOOLS · GPT-3.5, GPT-4o, Llama 3, LoRAs, CVEFixes
    - LANGUAGES · Python, Shell, C, C++
- Vyu Labs, Inc. / Software Engineering Intern · Cupertino, CA ..... 6/21 – 9/21 · 6/22 – 9/22  
Installed, tested, and certified development builds for mobile platforms. Ran debugging tools with breakpoints to rectify failing unit tests. Identified bugs and pushed builds onto CI/CD pipelines.
- Valkyrie Robotics / Engineering Mentor · Santa Clara, CA ..... 3/18 – 8/23  
Provided engineering mentorship to K-12 students towards building functional, adaptable robots.
- 

## PROJECTS, SKILLS & TECHNOLOGIES

Interactive Music Visualizer · C++/GLSL ..... 6/20 – present  
Built a cross-platform application to artistically visualize live and prerecorded musical input.

Skills & Technologies – C, C++, Python, Rust, LaTeX, Java, Shell, Linux/Unix, Git/GitHub, SQLite, DuckDB, GNU Make, Matlab, ANTLR, PyTorch, TensorFlow, OpenCV, and more
